

OPERATING PANEL

www.visionelevatorsindia.com

An interface in an elevator used to select the floor to which passengers wish to travel, consisting of a car button for each landing served by the elevator, an emergency stop switch, an alarm button, door-open and door-close buttons, and a number of key switches used by building management, maintenance, and emergency personnel.

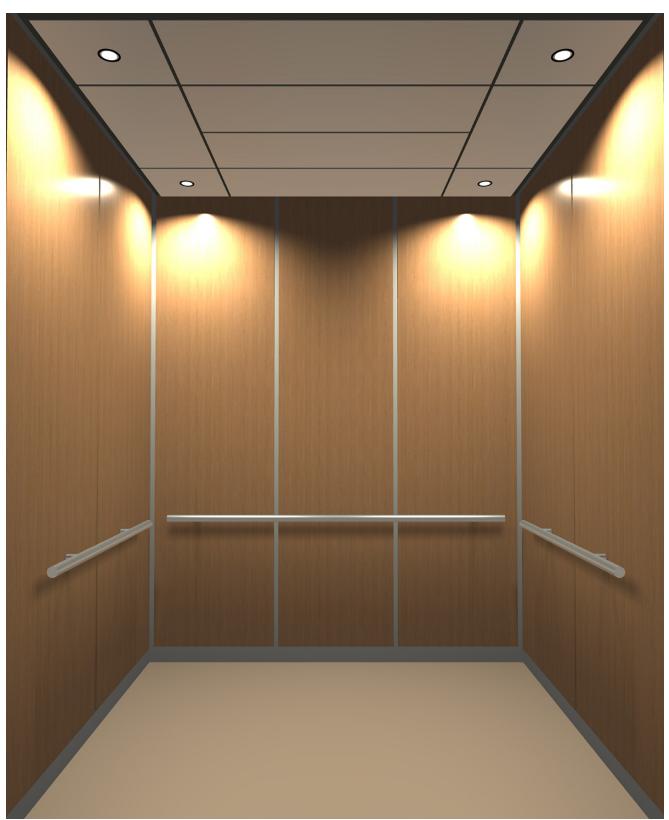

With our many years of experience, we are dedicated in providing a wide selection of Elevator Ceilings of the finest quality. According to customer needs, the offered cabin ceiling is available in a variety of parameters. The given cabin ceilings were created using materials and methods of the highest quality in accordance with industry norms.

You can request for customisable cabins according to the theme your building follows, changes styles, colors, add additional features, set elevator music and can even change the button types from hard press to touch enabled.

Vision Elevators accept all such requests happily and serve what you are looking for at its best feasible model.

Elevators require extra-tough flooring that can withstand heavy loads, impacts, abrasions. From foot traffic, shopping carts, wheelchairs, suitcases palette loads, and more, elevator flooring has to be tough. An elevator floor system needs should be available in multiple design options. It should have several colors, texture, and performance property options.
